DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 22, 2009 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Weining Wang on October 22, 2009.

The application has been amended as follows:

In claim 1, second to last line at end of claim, "welded" has been deleted.

In claim 10, ---Nb: 0.01 to 0.5%-- has been inserted after "Ti: 0.05 to 0.5%".

In Claim 10, --- +12/93Nb --- has been inserted in equation after "12/48Ti"

3. Claims 1, 3, 4 and 10 are allowable over the art of record.
4. The following is an examiner's statement of reasons for allowance: The art of record does not teach or suggest a hot rolled steel sheet as recited by claims 1, 3, 4,

and 10 having a defined composition with a microstructure composed of only bainitic ferrite and bainite and satisfying the equation $C - (12/48Ti + 12/93Nb - 12/14N - 12/32S) = >0$ to 0.05 so that an effective amount of solid solution C is present in said hot rolled steel sheet to form carbon clusters or precipitates with Mo and Cr to achieve excellent softening resistance of the weld heat affect zone when welded.

5. Present invention patentably distinguishes over applied reference, Japanese patent 408157957 (hereafter JP-957"), because objective and compositional parameters are different. Applicant's invention is directed to a high burring, high strength steel wherein an effective amount of C remains present in solid solution such that carbon clusters or precipitates with Mo and Cr can form to achieve excellent softening resistance at the weld heat affect zone when welded. In contrast JP-957 in paragraphs [0012]-[0015] is directed to hot rolled steel plate excellent in stretch flange workability with no concern for welding properties, and avoids dissolved (equivalent solid solution) carbides because it degrades elongation flanging properties.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Yee whose telephone number is 571-272-1253. The examiner can normally be reached on monday-friday 6:00 am-2:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
